EXAMINER

LUONG, PETER

ART UNIT

PAPER NUMBER

3737

MAIL DATE

DELIVERY MODE

09/24/2009

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/814,972	Applicant(s) LEE ET AL.	
	Examiner Peter Luong	Art Unit 3737	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 July 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-18, 20, 22, 24-28, 31-36, 38, 45 and 46 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-18, 20, 22, 24-28, 31-36, 38, and 45-46 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/13/2009 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4, 9-12, 16-18, 20, and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by McKinnon (US 5,792,055).

4. With respect to claims 1-4, 9-12, 16-18, 20, and 26 the patent of McKinnon discloses a MRI guidewire (abstract) comprising an inner conductor (13, i.e. center conductor), an outer conductor (15), a distal end sized and shaped for insertion into a subject to receive MRI signals (fig 1), a proximal end sized and shaped for insertion into a connector (col. 4, lines 54-65; see fig 1, it is inherent for a connection means to connect the guidewire to the control station), an insulated area between the outer and inner conductor (14), and the guidewire is connected to the MRI scanner and MRI

circuits (fig. 1). With respect to the inner and outer conductor contacts, the Examiner interprets the surface of the inner and outer conductors to be the contacts as any conductive material touching the surface of the conductor would be electrically coupled to the conductor. McKinnon discloses the inner conductor extending beyond the outer conductor (col. 4, ln. 57-65, col. 4, line 66 to col. 5, line 27; figs. 1-3). With respect to claim 16, the Examiner notes that any material can be made sterilizable. With respect to claim 22, McKinnon discloses an extension attachment at the proximal end of the guidewire (col. 5, ln. 7-9).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 25, 33, and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over McKinnon (US 5,792,055).

8. With respect to claim 25, McKinnon discloses the subject matter substantially as claimed except for wherein the inner conductor contact and the inner conductor define a diameter that is greater than a diameter of the inner conductor extending along the outer conductor. However, it is obvious to one of ordinary skill in the art to change the size of the diameter of the inner/outer conductors and contacts as the change in size is well within the skill level of one of ordinary skill in the art.

9. With respect to claim 38, the Examiner notes that any device can be disposed of after a single-use.

10. Claims 5-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over McKinnon (US 5,792,055) as applied to claim 1, further in view of Glowinski et al. (US 5,868,674).

11. The patent of McKinnon discloses the subject matter substantially as claimed except for wherein the guidewire diameter is between about 0.012 inches and 0.038 inches and an inner conductor diameter to be between about 0.004 inches and about 0.012 inches.

12. However, Glowinski et al. teaches a MRI catheter with a diameter between 0.3 mm (0.0118 inches) to 3 mm (0.118 inches) for insertion into a patient (fig. 1).

13. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the guidewire diameter to be about 0.012 inches and 0.038 inches as a change in size is within the skill level of one of ordinary

skill in the art. Furthermore, it would have been obvious for the inner conductor to be smaller than the guidewire.

14. Claims 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over McKinnon (US 5,792,055) as applied to claim 1, further in view of Lardo et al. (US 6,675,033).

15. With respect to claims 13-15, the patent of McKinnon discloses the subject matter substantially as claimed except for wherein the guidewire comprises titanium or nitinol.

16. However, Lardo et al. teaches a MRI guidewire probe comprising known super-elastic material comprising titanium and nitinol (col. 9, lines 25-50).

17. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided the super-elastic material as taught by Lardo et al. those materials are known for their high biocompatibility (col. 9, lines 32-35).

18. Claims 22, 24, 27-28, 31, 34-36, and 45-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over McKinnon (US 5,792,055) in view of Lardo et al. (US 6,675,033).

19. With respect to claims 22, 27-28, 31, 34-36, and 45, the patent of McKinnon discloses a MRI guidewire (abstract) comprising an inner conductor (13, i.e. center conductor), an outer conductor (15), a distal end sized and shaped for insertion into a subject to receive MRI signals (fig 1), a proximal end sized and shaped for insertion into a connector (col. 4, lines 54-65; see fig 1, it is inherent for a connection means to connect the guidewire to the control station), an insulated area between the outer and

inner conductor (14), and the guidewire is connected to the MRI scanner and MRI circuits (fig. 1). With respect to the inner and outer conductor contacts, the Examiner interprets the surface of the inner and outer conductors to be the contacts as any conductive material touching the surface of the conductor would be electrically coupled to the conductor. McKinnon discloses the inner conductor extending beyond the outer conductor (col. 4, ln. 57-65). (col. 4, line 66 to col. 5, line 27; figs. 1-3). With respect to claim 22, McKinnon discloses an extension attachment at the proximal end of the guidewire (col. 5, ln. 7-9).

20. McKinnon does not teach a connector, however, Lardo et al. teaches MRI guidewires releasably attachable to connectors. Lardo et al. teaches wherein all the components are non-magnetic (col. 14, lines 57-58). Lardo et al. teaches various sizes and shapes of the connectors (see figures). Lardo et al. teaches an interfacing circuit (fig. 26). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided McKinnon with connectors as taught by Lardo et al. in order facilitate connecting to interface circuitry to be connected to the MRI scanner (col. 11, lines 4-6).

21. With respect to claim 24, McKinnon discloses the subject matter substantially as claimed except for wherein the connector includes a wiper to inhibit the introduction of fluids into the connector. However, it is obvious to one of ordinary skill in the art to provide the connections between the guidewire and electronic circuitry with seals to prevent fluid contact as the intended use of a guidewire is to be inserted into a patient.

22. With respect to claim 46, McKinnon discloses the subject matter substantially as claimed except for wherein the inner conductor contact and the inner conductor define a diameter that is greater than a diameter of the inner conductor extending along the outer conductor. However, it is obvious to one of ordinary skill in the art to change the size of the diameter of the inner/outer conductors and contacts as the change in size is well within the skill level of one of ordinary skill in the art.

23. Claims 32 is rejected under 35 U.S.C. 103(a) as being unpatentable over McKinnon (US 5,792,055) in view of Lardo et al. (US 6,675,033) as applied to claim 45, further in view of Wiener et al. (US 7,273,483).

24. McKinnon discloses the subject matter substantially as claimed except for a guidewire sensor. However, Wiener et al. teaches in medical devices in which comprises releasable components for handpiece, blades, and shears to have unique identification numbers registered and stored in memory. Wiener et al. teaches the ID allows the system to acknowledge their compatibility and usability of each individual piece. (col. 13, lines 24-48). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided McKinnon with the unique ID system of Wiener et al. in order to allow the system to acknowledge the compatibility and useability of each component of guidewire and connector.

Response to Arguments

Applicant's arguments with respect to claims 1-18, 20, 22, 24-28, 31-36, 38, and 45-46 have been considered but are moot in view of the new ground(s) of rejection.

Applicant argues McKinnon does not teach the inner conductor extends beyond the outer conductor at the proximal end. However, the Examiner respectfully disagrees with the applicant. McKinnon discloses the outer conductor and insulator may be removed to the proximal end of the guidewire (col. 5, lines 10-16). Applicant further argues McKinnon does not teach wherein the extended section of the inner conductor includes an insulated area interposed axially between an outer conductor contact and inner conductor contact. However, the Examiner respectfully disagrees with the applicant and directs applicant to Figure 3 in which insulator 140 is disposed between the inner conductor 130 and outer conductor 150.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter Luong whose telephone number is (571)270-1609. The examiner can normally be reached on Monday - Friday, 9:30 a.m. - 6:00 p.m., EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on (571) 272-4956. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
